Ashutosh Sao

India (open to relocate) | ashutoshsao17@gmail.com | github | linkedin

Experience

Stealth Startup **Sep 2026 – Present**

Software Engineer (Contract) *Remote*

- Fixing production bugs in a live, **paid** video-consultation app (React Native, Firebase, VideoSDK): shipped 16 call-safety fixes, incl. duplicate calls on double-tap and a video-stream leak (∼1,800 native streams per 15-min call → 1 per track).
- Moving call billing **server-side**: idempotent call start with locked rates, credit holds that end calls when funds run out, billing on connected time, and a race-free booking lock, covered by **security-rules tests**.

Palisadoes Foundation **Sep 2025 – May 2026**

Open Source Contributor *Remote*

- Shipped **16 merged PRs** across Talawa (talawa-admin, talawa-api), end to end from GraphQL APIs to the React admin UI: invite-only events, shared forms and localized UX, with Vitest coverage.

Projects

Nebula | nebula.ashutoshsao.com | *TypeScript, Bun, Redis Streams, PostgreSQL, TimescaleDB, k8s* **June 2026 – Present**

- Built and deployed a perpetual-futures exchange: a single-writer in-memory matching engine fed by Redis Streams, with margin/liquidation, funding and snapshot/replay recovery; ∼**200k orders/sec**, p99 ∼40μs over 1M orders.
- Profiled the engine and traced a **30**× throughput loss to filled orders never leaving the book; fixed it with regression tests (11k → 320k orders/sec). Order-book updates stream over **WebSockets**; 6 services run on k8s (GCP).

Orin | orin.ashutoshsao.com | *TypeScript, Bun, Elysia, React, PostgreSQL, Redis, E2B, R2, k8s* **July 2026 – Present**

- Built and deployed an AI app builder: an agent writes and runs the user's app in a cloud sandbox, streaming a live preview over **SSE**, behind a provider-agnostic **LLM interface** (OpenAI-compatible + Claude APIs).
- Made builds crash-safe: per-round git snapshots pushed to **R2** off the hot path, so a dropped connection or dead sandbox resumes or rewinds to any earlier step (181 restorable checkpoints across 19 user-built apps).
- Added invite, guest-link and bring-your-own-key tiers with atomically-enforced step budgets, deployed to k8s on GCP with nightly backups verified by restore.

Ardin | ardin.ashutoshsao.com | *TypeScript, Next.js, PostgreSQL, Prisma, Jev, DeepSeek, Playwright* **Sep – Oct 2026**

- Built and deployed AI triage for trading-firm ops: reads live exchange and vendor feeds, asks a decision model typed questions per notice × system, and tickets only the teams whose systems are hit; unsure calls go to human review.
- Wrote the **eval** and **test** suite: on 28 hand-labelled notices, 27/28 routed right, 12/12 right team and severity, 0 wrong systems hit, and **5/5 prompt-injection** notices held for review (from 2/5); Playwright e2e tests; ∼$0.0005 per notice.

Care-Tip Feed | repo | *Python, Claude/Gemini/GPT APIs, Ollama, EmbeddingGemma, pytest* **Oct 2026**

- Designed a safety-first health-video feed where an LLM runs only when a profile changes, so cost scales with changes, not users; built the **eval** with planted traps and a 3-provider **LLM-judge** panel: **0 unsafe tips vs 12** for embedding-only.

Proxy | live | *TypeScript, React, Express, PostgreSQL, Prisma, AI SDK, Zod, Vercel* **Oct 2026**

- Built and deployed in **under 3 hours**: a multi-agent pipeline turns public LinkedIn + Instagram into a profile where every claim is **quote-checked** against the source (e.g. 67/68 verified), then agents go on 10-turn dates for their people (25 people, 90 dates).

Education

Super30 – 100xSchool **May 2026 – Present**

Post-graduate engineering residency (selective, full-time) *Noida, India*

- Built Orin and Nebula here, on weekly deadlines with peer code reviews and system-design critiques.

Shri Shankaracharya Technical Campus **Apr 2021 – Jun 2025**

Bachelor of Technology in Computer Science and Engineering; CGPA: 7.48/10 *Bhilai, Chhattisgarh*

Technical Skills

Languages: TypeScript, JavaScript, Rust, C++, Python, SQL
Backend: Node.js, Bun, Express, Elysia, GraphQL, WebSockets, SSE, Prisma, Drizzle
Data & Infra: PostgreSQL, TimescaleDB, Redis, Firebase, Docker, Kubernetes, Cloudflare R2, GitHub Actions
Frontend & Mobile: React, Next.js, React Native, Tailwind CSS
AI: LLM agent loops, tool calling, structured outputs, evals & LLM-as-judge, embeddings, Claude & OpenAI APIs

Achievements

Superteam Earn: 250 USDC prize, 100xDevs × Superteam Monthly Web3 Contest (Jun 2026)
Superteam SuperDevs: 1 of 100 from ∼2,500 applicants, 2-month Solana bootcamp; finalist (Mar – Apr 2026)
Open Source: 26 merged PRs since 2022 across Talawa (16), stdlib-js (8), Meshery and AsyncAPI
